

# HOW TO USE

## *Oxide Washes*

- **Oxide washes (stains) are a colorant mixed with water**
- **Mix the container so the colorant is blended**
- **use a brush to apply the oxide wash to either:**
  - **Bare clay that is not going to be glazed. This is a great way to bring out texture or slightly change the tint of the clay color**
  - **A piece that has been glazed. Let the glaze dry and apply the oxide wash on top of the glaze to create a design.**
- **Please note that oxide washes should NOT be dipped into a glaze. This could contaminate the glaze!**
- **A little wash goes a long way!**

*Let the staff or your teacher know if you have any questions!*
